

# Task 2 - API Integration & JSON Handling

## Goal

Learn how Python communicates with external APIs and handles JSON data.

## Requirements

- Fetch data using the Requests library.
- Parse JSON responses.
- Apply filtering or search logic.
- Handle API errors using try-except.

## Deliverables

1. Working API Python script.
2. Output screenshots with explanation.

## Suggested GitHub Repository Description

Python API Integration & JSON Handling project using the Requests library, JSON parsing, filtering, and exception handling.
